SUMMARY

Focused on software architecture and data integrity. At Grupo DELSUD I was the technical reference for a team of 5: I designed an administrative and accounting management system from scratch, connected it to an existing CRM through a dual-database architecture and took it to production. In parallel, tech lead of 2winGs, a B2B talent platform I build end to end: architecture, infrastructure, security and design.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- Currently on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket, versioned in a self-hosted GitLab and deployed by its GitLab CI pipelines.
- There I build the Directions ERP and the Product and Technology task board (React 19, micro-frontends embedded through iframes with postMessage), taking QA reports through to verified fixes in the app.
- Built the workday time-tracking module end to end: 14 endpoints, an immutable append-only log, role-based permissions, live updates over sockets and a floating control that operates the workday from any screen of the ERP, with the entry hanging off the project and the task optional.
- Closed out a system-wide audit across the microservice ecosystem: every open finding re-verified one by one, and three of them closed as deliberately not done, because what needs infrastructure access or a change in production is not this team's call.
- Prepared five backends for the production handover: a documentation check enforced in each one, a schema diagram per database, API collections, complete READMEs and environment examples, and a dead database and a dead environment variable removed.
- When the file storage provider became unavailable, moved uploads to a second provider behind a storage driver selected by a single environment variable, with no code changes to switch back.
- Designed the architecture of the Desarrollos Del Sud Management System from scratch (20 modules: contracts, collections, cash flow, inflation indexing, reporting) and took it to production in August 2026: a dual-database architecture connecting the existing CRM (Sequelize, ~25 models) with the new system (Drizzle ORM), with automatic two-way data synchronisation. Fifteen people across sales, administration and collections operate it today, over more than 200 contracts.
- Was the technical reference for a team of 5 (2 devs, UX, QA, PM): set the code standards and took part in the key technical decisions. Fixed critical data-integrity bugs, including race conditions on concurrent record creation, and improved the performance of the heaviest queries, down from 3 seconds to 0.6.

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Designed the architecture and the build order of a B2B professional network for creative talent, from the data model to the API contract, and delivered it end to end: sign-up and sign-in with email verification and password recovery; the talent profile; a validation flow with a review queue, levels and email notifications; reputation and XP with a weekly ranking, configurable in the database; and a space where companies publish challenges.
- A back office for the internal team, deployed behind Cloudflare Access: it authenticates with the identity Access signs and has no login form of its own.
- Infrastructure and automated deployment: the dashboard on Cloudflare Pages and the API on a dedicated server under PM2 behind nginx, with a GitHub Actions pipeline that builds off the server, copies the artifact over SSH, runs the migrations and only then restarts the process. Staging publishes itself and production is asked for: the last step of a release is taken by a person, by design. The database is dumped daily to a different provider, sealed against a public key, and the dump was restored against a throwaway database to prove it works.
- Two full security audits with every finding closed and verified live: rate limiting moved to Redis, a content-security policy and headers on both front-ends, SSH hardened to keys only, and mail authentication (SPF, DKIM and DMARC) verified in production. Privacy is enforced in the data layer, not in the interface.
- End-to-end tests in Playwright against the build as the main suite, with a coverage floor enforced in every workspace as part of the gate, a custom layer linter that fails the build when a module reaches across its boundary, and a WCAG 2.2 AA tag across the accessibility suites.
- Front-end design system: tokens named by function in a single file, mobile-first. When the client defined the brand identity, it went in by changing tokens: 52 colour literals collapsed into a single variable.

Full-Stack Developer — Cognitive Link — Consulting & IT Solutions

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control. It reached production with 5 businesses operating in parallel on the same instance.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — Cicaré

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — Felanix Construcciones

Sep 2023 — Sep 2024 · La Plata, Argentina

- Automated key processes of a construction management system that used to be manual, shortening task processing time.
- Developed the core business logic, applying Scrum to coordinate timelines and requirements.
- Managed timelines and requirements, keeping the project on schedule.
- Full technical support: hardware and software incidents to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- Java OOP Bootcamp — Alkemy (Apr. 2024)
- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Front-end
Next.js · React · JavaScript · Tailwind CSS · Material UI · Sass · Bootstrap · PWA

Back-end
Node.js · Express.js · NestJS · TypeScript · Ruby on Rails · Python

Databases
PostgreSQL · MySQL · SQLite · Redis · Supabase · Drizzle · Sequelize · Active Record

Architecture
Dual-DB · RBAC · Microservices · CI/CD (GitLab CI, GitHub Actions) · Migrations · Clean Code

Infrastructure
Docker · PM2 · nginx · Linux · GitLab CI · GitHub Actions · DigitalOcean · Vercel · Cloudflare Pages · Amazon S3 · Cloudflare R2

Tools
Git · GitLab · GitHub · Trello · Postman · Playwright · Vitest · DBeaver

LANGUAGES

Spanish — Native · **English** — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
