SUMMARY

Three years building production systems with Node.js and TypeScript, focused on software architecture, infrastructure and data integrity. At Grupo DELSUD I was the technical reference for a team of 5: I designed an administrative and accounting management system from scratch, connected it to an existing CRM through a dual-database architecture and took it to production. In parallel, tech lead of 2winGs, a B2B platform I build end to end: API, deployment pipeline, infrastructure and security.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- Designed the architecture of the Management System from scratch (20 modules: contracts, collections, cash flow, inflation indexing, reporting) over a dual-database architecture: the existing CRM (Sequelize, ~25 models) connected to the new system (Drizzle ORM), with automatic two-way data synchronisation.
- Desarrollos Del Sud: took the platform for selling plots in instalments to production (CRM, Management System and public website), delivered in August 2026. Fifteen people across sales, administration and collections operate it today, over more than 200 contracts.
- Currently on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket.
- Built the workday time-tracking module end to end: 14 endpoints and an immutable append-only log on the backend, with role-based permissions and live updates over sockets.
- Closed out a system-wide audit across the microservice ecosystem, took the heaviest queries from 3 seconds down to 0.6 by indexing them, and moved uploads to a second storage provider behind a driver selected by a single environment variable.
- Fixed critical data-integrity bugs, including race conditions on concurrent record creation and on the synchronisation between systems. Access control enforced with token verification and role authorisation middlewares on every endpoint.
- Was the technical reference for a team of 5 (2 devs, UX, QA, PM): set the code standards and took part in the key technical decisions together with the tech lead.
- On the front, I build the Directions ERP and the Product and Technology task board (React 19, micro-frontends embedded through iframes with postMessage).

Stack: Node.js · TypeScript · Express.js · NestJS · PostgreSQL · MySQL · Drizzle · Sequelize · Socket.io · GitLab · GitLab CI · Amazon S3 · React · Trello

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Designed the architecture and the build order of the product, from the data model to the API contract, written down as technical decisions before any code.
- Infrastructure and automated deployment end to end: API and worker live on a dedicated Linux server under PM2, dashboard on Cloudflare Pages, and the build always outside the production machine.
- Deployment pipeline on GitHub Actions: it builds off the server, copies the artifact over SSH, runs the migrations and only then restarts the process, with nginx as a reverse proxy in front of the API and two separate environments over HTTPS.
- Backups with a tested restore: a daily database dump by cron to a provider other than the one hosting the server, restored against a throwaway database to prove it works. The alarm fires on silence, when the dump did not arrive, not when it succeeds.
- Six startup guards that abort the process if the declared environment does not match the database or if production keys are present outside production, plus a health endpoint watched from outside that sends mail and logs carrying a request identifier.
- API in NestJS on Fastify with Drizzle and PostgreSQL, and background jobs with BullMQ and Redis: sign-up and sign-in, the talent profile, validation, reputation with a weekly ranking, the company space and an internal back office behind Cloudflare Access, all delivered end to end.
- Private files behind short-lived signed URLs, an operation id on every write so a retry cannot duplicate its effect, and privacy enforced in the data layer instead of the interface.
- End-to-end tests in Playwright against the build as the main suite, plus unit tests for the pure logic.
- Technical and regulatory analysis of the fund custody planned in the roadmap: built on top of a licensed processor, with money modelled as entries that are never edited from the very first schema.

Stack: TypeScript · NestJS · Fastify · PostgreSQL · Drizzle · Redis · BullMQ · GitHub Actions · nginx · PM2 · Cloudflare · Playwright · React

Full-Stack Developer — **Cognitive Link — Consulting & IT Solutions**

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control. It reached production with 5 businesses operating in parallel on the same instance.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — **Cicaré**

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — **Felanix Construcciones**

Sep 2023 — Sep 2024 · La Plata, Argentina

- Automated key processes of a construction management system that used to be manual, shortening task processing time.
- Developed the core business logic, applying Scrum to coordinate timelines and requirements.
- Managed timelines and requirements, keeping the project on schedule.
- Full technical support: hardware and software incidents to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- Java OOP Bootcamp — Alkemy (Apr. 2024)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Back-end
Node.js · TypeScript · NestJS · Express.js · Fastify · Ruby on Rails · Python

Architecture
Microservices · Dual-DB · REST APIs · Multi-tenant · RBAC · Migrations · Clean Code

Cloud & Infrastructure
Linux · Docker · nginx · PM2 · GitLab CI · GitHub Actions · Cloudflare · Amazon S3 · Vercel · Redis · BullMQ

Databases
PostgreSQL · MySQL · SQLite · Supabase · Drizzle · Sequelize · Active Record

Front-end
React · Next.js · Tailwind CSS · Material UI

Tools
Git · GitLab · GitHub · Trello · Postman · Playwright · Vitest · DBeaver

LANGUAGES

Spanish — Native · **English** — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
