SUMMARY

Three years of experience building APIs and data systems in production with Node.js and TypeScript, focused on architecture and data integrity. At Grupo DELSUD I was the technical reference for a team of 5 and took to production an administrative and accounting management system connected to an existing CRM through a dual-database architecture. In parallel, tech lead of 2winGs, a B2B platform I build end to end: API, infrastructure and security.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- Desarrollos Del Sud: took the platform for selling plots in instalments to production (CRM, Management System and public website), delivered in August 2026. Fifteen people across sales, administration and collections operate it today, over more than 200 contracts.
- Designed the architecture of the Management System from scratch, with 20 functional modules (contracts, collections, cash flow, inflation indexing, reporting, among others).
- Dual-database architecture: connected the existing CRM (Sequelize, ~25 models) with the new Management System (Drizzle ORM), with automatic two-way data synchronisation.
- Fixed critical data-integrity bugs, including race conditions on concurrent record creation and on the synchronisation between systems.
- Access control (RBAC): token verification and role authorisation middlewares, protecting every endpoint according to the user profile.
- Cleaned up the inherited CRM code so it could be reused in a new product: SQL queries (N+1 and selects without a field list), environment variables, unused dependencies and dead code.
- Was the technical reference for a team of 5 (2 devs, UX, QA, PM): set the code standards and took part in the key technical decisions together with the tech lead.
- Currently on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket.
- There I built the workday time-tracking module, now used by 20 people across 3 departments: 14 endpoints and an immutable append-only log on the backend, with role-based permissions and live updates over sockets; I also took the heaviest queries from 3 seconds down to 0.6 by indexing them.

Stack: Node.js · TypeScript · Express.js · MySQL · PostgreSQL · Sequelize · Drizzle · Socket.io · Amazon S3 · React · Trello

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Designed the architecture and build order of the product, from the data model to the API contract, written down as technical decisions before any code.
- API in NestJS on Fastify with Drizzle and PostgreSQL, and background jobs with BullMQ and Redis: first stage delivered end to end (sign-up, sign-in, email verification and password recovery).
- Privacy rules enforced in the data layer instead of the interface: a company reaches a full profile only for someone who applied to its opening.
- Security: private files behind short-lived signed URLs, and an operation id on every write so a retry cannot duplicate its effect.
- Plans, prices, limits, permissions and reputation index weights live in the database, with no hard-coded values.
- Infrastructure and automated deployment: API and worker live on a dedicated server under PM2, dashboard on Cloudflare Pages, and the build always outside the production machine.
- Automated deployment on GitHub Actions: it builds off the server, copies the artifact over SSH, runs the migrations and only then restarts, with nginx as a reverse proxy in front of the API and two separate environments over HTTPS. The database is dumped daily to another provider, and the dump was restored against a throwaway database to prove it works.
- Technical and regulatory analysis of the fund custody in the roadmap: built on top of a licensed processor, with money modelled as entries that are never edited from the very first schema.

Stack: TypeScript · NestJS · Fastify · PostgreSQL · Drizzle · Redis · BullMQ · Cloudflare R2 · PM2 · React

Full-Stack Developer — Cognitive Link — Consulting & IT Solutions

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control. It reached production with 5 businesses operating in parallel on the same instance.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — Cicaré

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — Felanix Construcciones

Sep 2023 — Sep 2024 · La Plata, Argentina

- Automated key processes of a construction management system that used to be manual, shortening task processing time.
- Developed the core business logic, applying Scrum to coordinate timelines and requirements.
- Managed timelines and requirements, keeping the project on schedule.
- Full technical support: hardware and software incidents to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- Java OOP Bootcamp — Alkemy (Apr. 2024)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Back-end

Node.js · TypeScript · Express.js · NestJS · Fastify · Ruby on Rails · Python

Architecture

Dual-DB · REST APIs · Microservices · RBAC · Migrations · Clean Code

Front-end

React · Next.js · Tailwind CSS · Material UI

Databases

PostgreSQL · MySQL · SQLite · Redis · Supabase · Drizzle · Sequelize · Active Record

Infrastructure

Linux · Docker · PM2 · nginx · GitHub Actions · BullMQ · Vercel · Cloudflare Pages · Amazon S3 · Cloudflare R2

Tools

Git · GitHub · Trello · Postman · Playwright · Vitest · DBever

LANGUAGES

Spanish — Native · English — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
