SUMMARY

Focused on software architecture and data integrity. At Grupo DELSUD I was the technical reference for a team of 5: I designed an administrative and accounting management system from scratch, connected it to an existing CRM through a dual-database architecture and took it to production. In parallel, tech lead of 2winGs, a B2B talent platform I build end to end: architecture, infrastructure, security and design.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- Desarrollos Del Sud: took the platform for selling plots in instalments to production (CRM, Management System and public website), delivered in August 2026. Fifteen people across sales, administration and collections operate it today, over more than 200 contracts.
- Designed the architecture of the Management System from scratch, with 20 functional modules (contracts, collections, cash flow, inflation indexing, reporting, among others).
- Dual-database architecture: I connected the existing CRM (Sequelize, ~25 models) with the new Management System (Drizzle ORM), with automatic two-way data synchronisation.
- Cleaned up the CRM's inherited code so it could be reused in a new product: folder structure, environment variables, SQL queries, dependencies and dead code.
- Access control (RBAC): token verification and role authorisation middlewares, protecting every endpoint according to the user profile.
- Was the technical reference for a team of 5 (2 devs, UX, QA, PM): set the code standards and took part in the key technical decisions together with the tech lead.
- Fixed critical data-integrity bugs, including race conditions on concurrent record creation and on the synchronisation between systems.
- Presented the Management System to the end client and trained the people who would operate it.
- Currently on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket.
- There I build the Directions ERP and the Product and Technology task board (React 19, micro-frontends embedded through iframes with postMessage), taking QA reports through to verified fixes in the app.
- Built the workday time-tracking module end to end: 14 endpoints and an immutable append-only log on the backend, and on the front the workday control and the reporting view, with role-based permissions and live updates over sockets. Twenty people across three departments log their workday there today.
- I also work on the system's performance (leaner responses and indexing for the heaviest queries, down from 3 seconds to 0.6) and on security fixes across the microservice ecosystem.

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Design of the architecture and of the build order of a B2B professional network for creative talent, from the data model to the API contract, written down as technical decisions before any code.
- First stage delivered end to end: sign-up, sign-in, email verification and password recovery, with their screens.
- Infrastructure and automated deployment end to end: the dashboard published on Cloudflare Pages and the API live on a dedicated server under PM2, with the build always outside the production machine.
- Deployment pipeline on GitHub Actions: it builds off the server, copies the artifact over SSH, runs the migrations and only then restarts the process, with nginx as a reverse proxy in front of the API and two separate environments over HTTPS.
- Backups with a tested restore: a daily database dump by cron to a provider other than the one hosting the server, restored against a throwaway database to prove it works. The alarm fires on silence, when the dump did not arrive, not when it succeeds.
- Six startup guards that abort the process if the declared environment does not match the database or if production keys are present outside production, plus a health endpoint watched from outside that sends mail, logs carrying a request identifier, and log rotation compatible with the process manager.
- End-to-end tests in Playwright against the build as the main suite, plus unit tests for the pure logic.
- Security: private files behind short-lived signed URLs, the professional's CV restricted to the validation team, and an operation id on every write so a retry cannot duplicate its effect.
- Privacy rules enforced in the data layer instead of the interface: a company reaches a full profile only for someone who applied to its opening.
- Reputation and gamification system configurable in the database (plans, prices, limits, permissions and index weights), with no hard-coded values.
- Front-end design system: tokens named by function in a single file, mobile-first and with accessibility criteria, ready to take on the brand identity once the client defines it.
- Technical counterpart for the client: I turned three product documents that contradicted each other into a hierarchy of sources of truth, which the client adopted as its decision criterion.
- Technical and regulatory analysis of the fund custody planned in the roadmap: why it is solved on top of a licensed processor, and why money is modelled as entries that are never edited from the very first schema, even though the module comes later.

Full-Stack Developer — Cognitive Link — Consulting & IT Solutions

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control. It reached production with 5 businesses operating in parallel on the same instance.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — Cicaré

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — Felanix Construcciones

Sep 2023 — Sep 2024 · La Plata, Argentina

- Automated key processes of a construction management system that used to be manual, shortening task processing time.
- Developed the core business logic, applying Scrum to coordinate timelines and requirements.
- Managed timelines and requirements, keeping the project on schedule.
- Full technical support: hardware and software incidents to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- Java OOP Bootcamp — Alkemy (Apr. 2024)
- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Front-end

Next.js · React · JavaScript · Tailwind CSS · Material UI · Sass · Bootstrap · PWA

Databases

PostgreSQL · MySQL · SQLite · Redis · Supabase · Drizzle · Sequelize · Active Record

Infrastructure

Docker · PM2 · nginx · Linux · GitHub Actions · DigitalOcean · Vercel · Cloudflare Pages · Amazon S3 · Cloudflare R2

Back-end

Node.js · Express.js · NestJS · TypeScript · Ruby on Rails · Python

Architecture

Dual-DB · RBAC · Microservicios · CI/CD · Migrations · Clean Code

Tools

Git · GitHub · Trello · Postman · Playwright · Vitest · DBeaver

LANGUAGES

Spanish — Native · **English** — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
