SUMMARY

Full-stack developer with production experience in Ruby on Rails: Rails with Active Record and PostgreSQL on Docker at Felanix Construcciones, where I automated manual processes of a construction management system and built its core business logic. Since then I have worked across the same stack this role calls for: React and Next.js on the front, Node.js, TypeScript and Python on the back, containerized applications, cloud environments and CI/CD pipelines on GitLab CI and GitHub Actions. At Grupo DELSUD I was the technical reference for a team of 5: I designed an administrative and accounting management system from scratch and took it to production, connected to an existing CRM. In parallel, tech lead of 2winGs, a B2B talent platform I build end to end: architecture, infrastructure, security and design.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- I currently work on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket, versioned in a self-hosted GitLab and deployed by its CI/CD pipelines.
- There I built the workday time-tracking module end to end: 14 endpoints and an immutable append-only log on the backend, and on the front the workday control and the reporting view, with role-based permissions and live updates over sockets. I then extended it with a floating control that operates the workday from any screen of the ERP and asks what the time is being tracked against, with the entry hanging off the project and the task optional.
- Closed out a system-wide audit across the microservice ecosystem: every open finding re-verified one by one, and three of them closed as deliberately not done, because what needs infrastructure access or a change in production is not this team's call.
- When the file storage provider became unavailable, I moved uploads to a second provider behind a storage driver selected by a single environment variable, with no code changes needed to switch back, and deletion resolved from the stored URL so files uploaded earlier keep working.
- Designed the architecture of the Desarrollos Del Sud Management System from scratch, with 20 functional modules (contracts, collections, cash flow, inflation indexing, reporting), and took it to production in August 2026: a dual-database architecture connecting the existing CRM (Sequelize, ~25 models) with the new system (Drizzle ORM), with automatic two-way data synchronisation. Fifteen people across sales, administration and collections operate it today, over more than 200 contracts.
- Fixed critical data-integrity bugs, including race conditions on concurrent record creation and on the synchronisation between systems. I was the technical reference for a team of 5 (2 devs, UX, QA, PM): I set the code standards and took part in the key technical decisions together with the tech lead.

Stack: TypeScript · Node.js · Express.js · Microservices · React · Next.js · PostgreSQL · MySQL · Drizzle · Sequelize · Socket.io · GitLab · GitLab CI · Amazon S3 · Trello

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Designed the architecture and the build order of the platform, from the data model to the API contract, written down as technical decisions before any code.
- Delivered end to end: sign-up and sign-in with email verification and password recovery; the talent profile with skills, links, experience and CV; a talent validation flow with a review queue, levels and email notifications; a reputation and XP system with a weekly ranking; and a company space where companies publish challenges.
- A back office for the internal team, deployed behind Cloudflare Access: it authenticates with the identity Access signs and has no login form of its own.
- Infrastructure and automated deployment: a GitHub Actions pipeline that builds off the server, copies the artifact over SSH, runs the migrations and only then restarts the process, with nginx as a reverse proxy in front of the API and two separate environments over HTTPS. Staging publishes itself and production is asked for: the last step of a release is taken by a person, by design.
- Two security audits with every finding closed and verified live: rate limiting moved to Redis and no longer usable to lock an account out by address, a content-security policy and headers on both front-ends, self-hosted fonts, a challenge on sign-up and recovery, and SSH hardened to keys only. The database is dumped daily to a different provider, sealed against a public key, and the dump was restored against a throwaway database to prove it works.
- End-to-end tests in Playwright against the build as the main suite, with a coverage floor enforced in every workspace as part of the gate, and a custom layer linter that fails the build when a module reaches across its boundary.

Stack: TypeScript · NestJS · Fastify · PostgreSQL · Drizzle · Redis · BullMQ · React · Docker · nginx · GitHub Actions · Playwright

Full-Stack Developer — Cognitive Link — Consulting & IT Solutions

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control. It reached production with 5 businesses operating in parallel on the same instance.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — Cicaré

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — Felanix Construcciones

Sep 2023 — Sep 2024 · La Plata, Argentina

- Automated key processes of a construction management system that used to be manual, shortening task processing time.
- Developed the core business logic in Ruby on Rails, with Active Record over PostgreSQL and the application running on Docker.
- Coordinated timelines and requirements applying Scrum, keeping the project on schedule.
- Full technical support: hardware and software incidents, to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- Java OOP Bootcamp — Alkemy (Apr. 2024)
- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Back-end
Ruby on Rails · Active Record · Node.js · Express.js · NestJS · TypeScript · Python

Front-end
React · Next.js · JavaScript · HTML · CSS · Tailwind CSS · Bootstrap · Sass · Material UI

Databases
PostgreSQL · Redis · MySQL · SQLite · Supabase · Drizzle · Sequelize

Architecture
Microservices · RBAC · CI/CD (GitLab CI, GitHub Actions) · Migrations · Dual-DB · Clean Code

Infrastructure
Docker · Linux · nginx · PM2 · Cloudflare Pages · Vercel · DigitalOcean · Amazon S3

Quality
Playwright · Vitest · Automated testing · Code review

Tools
Git · GitLab · GitHub · Trello · Postman · DBeaver

LANGUAGES

Spanish — Native · **English** — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
