SUMMARY

Focused on software architecture and data integrity. At Grupo DELSUD I was the technical reference for a team of 5: I designed an administrative and accounting management system from scratch, connected it to an existing CRM through a dual-database architecture and took it to production. In parallel, tech lead of 2winGs, a B2B talent platform I build end to end: architecture, infrastructure, security and design.

EXPERIENCE

Full-Stack Developer — Grupo DELSUD

Jan 2026 — Present · La Plata, Argentina

- Desarrollos Del Sud: took the platform for selling plots in instalments to production (CRM, Management System and public website), delivered in August 2026.
- Designed the architecture of the Management System from scratch, with 20 functional modules (contracts, collections, cash flow, inflation indexing, reporting, among others).
- Dual-database architecture: I connected the existing CRM (Sequelize, ~25 models) with the new Management System (Drizzle ORM), with automatic two-way data synchronisation.
- Cleaned up the CRM's inherited code so it could be reused in a new product: folder structure, environment variables, SQL queries, dependencies and dead code.
- Access control (RBAC): token verification and role authorisation middlewares, protecting every endpoint according to the user profile.
- Was the technical reference for a team of 5 (2 devs, UX, QA, PM): set the code standards and took part in the key technical decisions together with the tech lead.
- Fixed critical data-integrity bugs, including race conditions on concurrent record creation and on the synchronisation between systems.
- Presented the Management System to the end client and trained the people who would operate it.
- Closed around 65% of the team's tickets each sprint, consistently assigned the most technically complex ones.
- Currently on SGD, the group's internal management system: Node/PostgreSQL microservices, one per department, with real-time notifications over WebSocket.
- There I build the Directions ERP and the Product and Technology task board (React 19, micro-frontends embedded through iframes with postMessage), taking QA reports through to verified fixes in the app.
- Built the workday time-tracking module end to end: 14 endpoints and an immutable append-only log on the backend, and on the front the workday control and the reporting view, with role-based permissions and live updates over sockets.
- I also work on the system's performance (leaner responses and indexing for the heaviest queries) and on security fixes across the microservice ecosystem.

Full-Stack Developer and Tech Lead (Freelance) — 2winGs International Group LLC

Aug 2026 — Present · Remote

- Design of the architecture and of the build order of a B2B professional network for creative talent, from the data model to the API contract, written down as technical decisions before any code.
- First stage delivered end to end: sign-up, sign-in, email verification and password recovery, with their screens.
- Infrastructure and automated deployment end to end: the dashboard published on Cloudflare Pages and the API live on a dedicated server under PM2, with the build always outside the production machine.
- Security: private files behind short-lived signed URLs, the professional's CV restricted to the validation team, and an operation id on every write so a retry cannot duplicate its effect.
- Privacy rules enforced in the data layer instead of the interface: a company reaches a full profile only for someone who applied to its opening.
- Reputation and gamification system configurable in the database (plans, prices, limits, permissions and index weights), with no hard-coded values.
- Front-end design system: tokens named by function in a single file, mobile-first and with accessibility criteria, ready to take on the brand identity once the client defines it.
- Technical counterpart for the client: I turned three product documents that contradicted each other into a hierarchy of sources of truth, which the client adopted as its decision criterion.
- Technical and regulatory analysis of the fund custody planned in the roadmap: why it is solved on top of a licensed processor, and why money is modelled as entries that are never edited from the very first schema, even though the module comes later.

Stack: TypeScript · NestJS · Fastify · PostgreSQL · Drizzle · Redis · BullMQ · React · Vite · Tailwind CSS · Cloudflare Pages · Cloudflare R2 · PM2

Full-Stack Developer — Cognitive Link — Consulting & IT Solutions

Mar 2025 — May 2026 · La Plata, Argentina

- Built a multi-tenant SaaS platform from scratch (retail and clinical), extending the base relational model to more than 24 tables with safe per-client data isolation and role-based access control.
- Integrations with the Mercado Pago SDK and the Google Calendar API (OAuth 2.0) for automatic appointment and payment handling.
- Scheduled jobs (cron) to send notifications and reminders to users automatically.
- Continuous deployment: autonomous setup and management of the production environments on Vercel.

Stack: Next.js 14 · Node.js · TypeScript · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer (Freelance) — Cicaré

Mar 2025 — Aug 2025 · Saladillo, Argentina

- Design and implementation of a scalable architecture with authentication and permission management for a platform holding confidential information.
- End-to-end full stack: persistence on Supabase, endpoints and administrative approval flows.
- Hierarchical content structure with advanced, customisable search filters.
- Automation of key notifications and interface work for faster navigation.

Stack: Next.js · Node.js · PostgreSQL · Supabase · Tailwind CSS

Full-Stack Developer — Felanix Construcciones

Sep 2023 — Sep 2024 · La Plata, Argentina

- Cut task processing time by 20% by automating key processes of a construction management system.
- Developed the core business logic, applying Scrum to coordinate timelines and requirements.
- Managed timelines and requirements, keeping the project on schedule.
- Full technical support: hardware and software incidents to keep operations running.

Stack: Ruby on Rails · Active Record · PostgreSQL · Docker · JavaScript · Bootstrap · Trello

EDUCATION

Bachelor's Degree in Systems — Universidad Nacional de La Plata (UNLP) · Dec 2023 — Present

Courses

- Java OOP Bootcamp — Alkemy (Apr. 2024)
- GNU/Linux Server Administration (Security) — Buenos Aires Ministry of Education (Dec. 2023)
- Database Administration (MySQL) — Buenos Aires Ministry of Education (Nov. 2023)
- Professional Ruby on Rails Course — Código Facilito (Nov. 2023)
- React Front-end Development Track — Coderhouse (Feb.–Jul. 2023)
- Git and GitHub — Alura Latam (Apr. 2023)

SKILLS

Front-end

Next.js · React · JavaScript · Tailwind CSS · Material UI · Sass · Bootstrap · PWA

Databases

PostgreSQL · MySQL · SQLite · Redis · Supabase · Drizzle · Sequelize · Active Record

Infrastructure

Docker · PM2 · Vercel · Cloudflare Pages · Amazon S3 · Cloudflare R2

Back-end

Node.js · Express.js · NestJS · TypeScript · Ruby on Rails · Python

Architecture

Dual-DB · RBAC · Migrations · Clean Code

Tools

Git · GitHub · Trello · Postman · Vitest · DBeaver

LANGUAGES

Spanish — Native · **English** — Intermediate (B1) — daily technical reading and writing

SOFT SKILLS

Analytical thinking · Clear communication · Teamwork · Adaptability · Initiative
